Fall Alarm For Elderly For Immediate Response

Every one of us know that life becomes miserable and difficult with the passage of time and especially when you have someone in home who is above 60's then it is not that easy to live comfortably and without panic. Mostly people prefer to send the seniors to the nursing homes but the elders themselves prefer to stay at homes, because they have memories and they just don't want to go away from the family in the last stages of the life. Making them stay at home could be your wish too; but for this you need to employ certain resources to make it possible otherwise you would face certain challenges. Research has shown that about one third of the senior ages of 65 or above fall every year and more seniors like 85 are more prone to the risk. In today's world it is not easy to give twenty four hours care to the elders because of the businesses one have; so the ultimate solution is having a fall alarm to keep one updated and satisfied.

There are different kinds of alarm system which can be used for emergency use; but commonly it is found in the form of pendant, bracelet or small key chain like devices with a button which has help written on it which when pressed connects to the emergency center. There is other advance kind of alarm as well which detects the sudden and abrupt motion and sends the message to the emergency response center automatically.

Types of fall alarm

There are many kinds of fall alarm but we are going to discuss here the most preferred alarms by the people.

SureSafe Epilepsy fall alarms

It is the best and ultimate solution for the people having epilepsy. It can be found in night and day alarms; the former can be used when one is fallen suddenly due to seizure and the latter can be used during night time during sleep.

SureSafe Epilepsy bed sensor

It is difficult for the care giver to give full time especially during night so the ultimate solution lies in this kind of alarm. It is a sensor mat which is put under the mattress to monitor the movement of the affected person. When the person on bed has a tonic-clonic seizure the sensor activates the wireless alarm system and it automatically connect to the 24/7 response center.

SureSafe Epilepsy day fall alarm

In this kind of alarm which when one falls it automatically send signal to the 24/7 response center and one does not need to push the button. It has a small fall sensor which can be worn in three ways: like a pendant, on the belt buckle or clipped onto the clothing like a brooch. It has a barometer and accelerometer which detects the pressure of air and acceleration of the movement and the response center room acts accordingly.

Advantages of fall alarm

It has certain advantages too like, it is easy to use i.e. don't need to press button, it is water proofed and it looks beautiful in the form of necklaces.
